

<p><i>Get started with an ArcGIS Online Organization</i></p>	<p>See the example and do this task.</p>
<p>Establish an ArcGIS Online Organization subscription account. This should be done by an authorized representative of a school, typically a teacher working with a tech person or administrator. Advanced planning for use of the Organization is advised, including discussions of roles, security, and credits.</p>	<p><a href="#">Download the form</a> fill it out, and submit with the required verification. After processing by Esri, instructions will be sent to the provided email address. While waiting, see the doc <a href="#">Ago Orgs for Schools</a>.</p> <p><a href="#">Ago Orgs for Schools</a></p>
<p>Make sure the Organization is set up properly for use in school. Pay special attention to roles and privileges, the login process, and to sharing or not sharing outside the school. GeoMentors can help a lot in setting up the Organization properly.</p>	<p>Review the Org <a href="#">videos available</a>. See also these sections in Help for ArcGIS Online: <a href="#">Activate subscription</a>; <a href="#">Configure website</a>; <a href="#">Invite users</a>; <a href="#">Manage resources</a>.</p>
<p>Organizations operate similarly to a public account for building maps, but offer an additional rich set of premium data. Explore these extra layers, but know that viewers must be logged into an Organization to see any map saved using one of these layers.</p>	<p>Log in to the Organization, make a new map, choose Add/Browse Esri Map Layers. See also the <a href="#">Browse Esri Map Layers</a> section of Help for ArcGIS Online.</p>
<p>A key power of Organizations is publishing services. Published content can be shared with others for adding into many maps. Feature services can, if desired, be edited by users, allowing for selective or crowd-sourced data gathering. Feature services can be filtered to enhance analysis. Tile services offer fast drawing. Users can mix and match content in new and creative ways. This is an area where GeoMentors can be of great help, streamlining and clarifying the process of publishing.</p>	<p>See <a href="#">About hosted features and tiles</a> in Help for ArcGIS Online. Practice first with small data sets, like the earthquakes.csv and states.zip (from Level 2 Set Four).</p>
